DETAILED ACTION

1. This office action is in response to communication filed on 10/17/2006.

2. Claims 1-3 and 5-8, 24-25, 38, 40-42, 50-55, 58-59 are presently under consideration. Claims 4, 9-23, 26-37, 43-49, 56-74 have been previously canceled. Claims 75-79 were previously withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1-3, 4-8, 24-25, 38, 40-42, 50-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Copple et al. (6,178,408 hereinafter Copple) in view of Applicant's background of the invention.

With respect to claims 1, 50, Copple teaches an offline-Online points system operable to provide a user with an interface to submit a code obtainable from user from an item (col. 3, lines 64- to col. 4, lines 34); operable to maintain a set of valid codes and to determine whether the code submitted by the user is a valid code and if valid then to credit the user balance with other points credited for point actionable activities (col. 4, lines 5-26) redeemable for value including for an item which the user won in an

Art Unit: 3622

auction (see Figure 4a); operable to track the point balance in an account with an account database having a plurality of accounts configurable for transferring points therebetween (Figure 2a, 210); tracking a point balance of the user in an account of an account database having a plurality of accounts to transfer points among the plurality of accounts and to characterize each point of the point balance as one of purchase (col. 4, lines 8-26)

With respect to the actionable activities including an advertisement and registering with a website. Applicant admitted on page 2, lines 15-19 that it is old and well known for one of the activities for earning points is **clicking on advertisements**, **filling out registrations and surveys....**Users accumulate points into an account from which they can redeem their points for certain goods or services. It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included for one of the actionable activities to include an advertisement and registering with a website because such a modification would allow customers to earn points for their time without having the need to make a purchase.

With respect to accepting items for auctions from the users. The Examiner takes Official Notice that it is old and well known for users of the system such as eBay to place items for auction because such a modification would allow the users to make a profit from selling items. It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included accepting items for auctions from the users in order to obtain the above mentioned advantage.

Art Unit: 3622

Claims 38, 40 further recite purchase and attention incentive points having different payment values. Official notice is taken that it is old and well known for different incentive points to have different payment values. For example, certain coupons are characterized as double coupons and they have a different value than regular coupons. It would have been obvious to a person of ordinary skill in the art at the time of Applicant's invention to have included recite purchase and attention incentive points having different payment values in order to differentiate the different point program.

With respect to claims 2-3, Copple further discloses maintaining a user account containing the points balance for the user and updates the user account after the user submits a valid code (col. 3, lines 64 to col. 4, lines 34).

With respect to claims 5-8, Copple discloses a system for an awards points account and therefore it would have been obvious to one of ordinary skill in the art at the time of Applicant's invention was made to identify the coupon used in Copple using any numbers of letters, numbers and/or characters. One would have been motivated to allow the use of a variable length code on the coupon in order to increase the flexibility of the system to encompass both and large point systems, i.e. a large system with millions of users submitted multiple codes (e.g. 100) each would require identification codes much larger than a system with only 100 users who submit only 5 codes each.

Art Unit: 3622

With respect to claim 25, Copple further discloses that the code (coupon) is affixed to the product or product packaging, it is not explicitly disclosed that the product packaging is a bottle cap. However, the inside surface of a bottle cap, the sides of plastic or paper food and beverage containers, the inside surface of candy wrappers, etc. are all well known pads of product packaging used to carry and/or conceal game pieces and codes. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to print the code on the inside of a bottle cap of Copple's product. One would have been motivated to print the code on the bottle cap in order to prevent an unauthorized person from removing the code without purchasing the product.

With respect to claim 52, Copple explicitly discloses that point systems are known in which the points can be redeemed for a gift or discount (col. 1, lines 23-27).

With claim 54, Copple do not explicitly disclose the type of auction. The Examiner notes that the claimed auction types are all well known types of auctions.

Furthermore, the type of auction being conducted has no effect whatsoever on the claimed system of accumulating and redeeming incentive points. Thus, little patentable weight is given to the type of auction or how the auction is run. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to know that any method of determining an item to purchase for which the award points would be redeemed could be used, to include any type of auction, since the procedure

has no connection to the incentive awards method.

With respect to claims 41, 55, Copple further discloses adding or subtracting points from the account based on the users interaction (point-actionable event) with the system; thus, maintaining a user account containing the points balance for the user and updates the user account after the user submits a valid code or a winning bid (col. 3, line 64 – col. 4, line 34).

With respect to claims 24, 42 and 51, Copple does not explicitly disclose that the user account would be placed behind a firewall and further protected using encryption. Copple discloses that a user's registration information also includes a "personalized log on password" (col. 5, lines 4-6). While it is not explicitly disclosed that the account data will also been encrypted, encryption is a well known security measure used to protect data especially when it is being transmitted over an unsecured network such as the Internet and, thus, would have been an obvious addition to the security measures disclosed by Copple.

Response to Arguments

4. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Contact

Art Unit: 3622

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raquel Alvarez whose telephone number is (571)272-6715. The examiner can normally be reached on 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eric w. Stamber can be reached on (571)272-6724. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
